Airmar/Furuno M260 1kW In-Hull Transducer

DESCRIPTION:

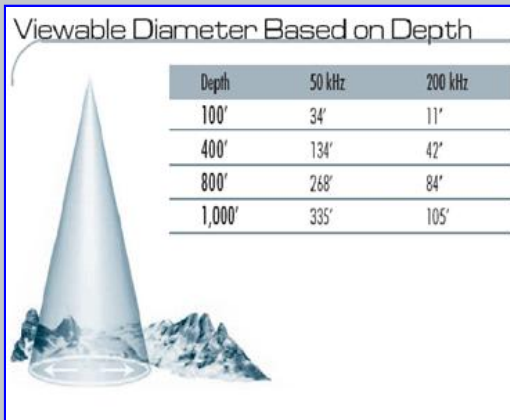

Get all the accuracy and performance of a thru-hull without the trouble of installation with this in-hull transducer. The 200 kHz element of the M260 provides high-resolution performance without losing sensitivity due to its in-hull placement. Mixed with a seven-element 50 kHz array, the narrow beams of this transducer at both frequencies results in amazing deep water detection, as well as easily distinguishing between the fish and the bottom. The M260 is able to transmit as well as receive signals through the solid fiberglass hull creating crystal clear images even at speeds of up to 30 knots. Installation requires simply adhering the transducer tank to the inside

of the hull, leaving you with a sleek and unmodified hull exterior.

- Interfaces with BBFF3 and FCV units: 292, 261, 271, 291, 252, 262, 363, 381, 382, 361, 782, 292, 1000, 1100, 1200BB, 1200, and 1500.
- This model does not have a diplexer and is for dual transmission line fishfinders
- Non-toxic anti-freeze (propylene glycol) is used to fill the tank
- No Connector Provided (usually supplied with Furuno Fishfinder)
 - We do have connectors available, email us for pricing
- Furuno # 525-IHD
- Airmar # 41-233-1-02

More information can be found at the manufacturer's websites:
